Name of Candidate	Role
V.GAUTHAM	DATABASE MySQL database, Maintenance Billing, Payment Tracking, Complaints, Admin Dashboard
G.ROHITH	FRONTEND React.js UI, Login/Register, Resident Profiles, Notices, Amenity Booking
S.SARVESHWARA REDDY	BACKEND Node.js/Express.js backend, APIs, Visitor Management, Gate Passes, Security/Staff Records

ABSTRACT

- The **Society/Apartment Management Portal** is a web-based application designed to simplify and digitize the day-to-day management activities of residential apartments and housing societies. In many apartments, activities such as maintenance fee collection, complaint handling, visitor entry, amenity booking, and communication with residents are managed manually or through separate systems. This can result in inefficient record management, delayed communication, and difficulty in tracking payments and requests.

The proposed system provides a centralized platform where apartment administrators and residents can efficiently manage these activities. The portal maintains resident and flat information and allows administrators to generate and track maintenance bills. Residents can view their maintenance dues and make online payments through the integrated payment facility. The system also supports visitor gate-pass management for maintaining visitor records and improving entry management.

The system will use a structured database to maintain resident, payment, complaint, visitor, and booking information. Overall, the project aims to provide an organized, convenient, and centralized solution for managing residential society operations.

INTRODUCTION

- Residential societies need a common platform to manage day-to-day operations as the number of residents grows.
- The current process often depends on paper registers, spreadsheets, and WhatsApp groups, making information difficult to track and audit.
- The proposed portal brings resident records, security logs, billing, complaints, notices, and amenity bookings into one system.
- Role-based access allows residents/owners, security staff, and administrators to use the functions relevant to them.

EXISTING SYSTEM

- Manual record keeping through paper registers and spreadsheets.
- Visitor and delivery information recorded separately at the gate.
- Maintenance dues, payment tracking, and reminders handled inconsistently.
- Complaints and notices distributed through chat groups without centralized accountability.
- As the society grows, records become difficult to search, verify, and maintain as a single source of truth.

PROBLEM

- Scattered records can lead to lost, duplicated, or outdated information.
- Manual billing and payment tracking can cause delays and make follow-up difficult.
- Visitor, delivery, and staff entry records are not centrally available.
- Complaints can be missed because they are spread across different communication channels.
- Residents and administrators lack one centralized view of society operations.

SOLUTION (Contribution)

- Develop a centralized web portal for residential society operations.
- Provide role-based login and resident/owner profile management.
- Maintain digital visitor logs and gate passes for security tracking.
- Generate and track maintenance bills, collect payment details/proof, and support admin verification.
- Provide complaint ticketing, notice board, and amenity booking in one platform.
- Give administrators a dashboard for occupancy, dues, complaints, and security information.

OBJECTIVES

- Centralize resident and apartment information in a structured database.
- Digitize visitor, delivery, staff, and gate-pass records.
- Improve maintenance billing and payment-status tracking.
- Provide transparent complaint registration and status tracking.
- Enable convenient booking of shared amenities.
- Improve communication through centralized notices and administrative updates.
- Provide administrators with a consolidated operational dashboard.

MODULES

- Resident Management – profiles, family members, ownership/tenancy records, and role-based login.
- Visitor & Security – digital gate passes, visitor logs, and staff/delivery entry tracking.
- Maintenance & Billing – dues generation, payment tracking, and due-date reminders.
- Complaints & Notices – ticketed complaint tracking and a shared society notice board.
- Amenity Booking – slot-based booking for clubhouse, parking, and community halls.
- Admin Dashboard – analytics on occupancy, dues, complaints, and security logs.

SOFTWARE REQUIREMENTS

- Frontend: React.js
- Backend: Node.js and Express.js
- Database: MySQL
- Payment integration/support: Razorpay
- Notifications: Firebase Cloud Messaging (FCM)
- Development: Modern web browser, code editor, Node.js runtime, and MySQL server

CONCLUSION AND FUTURE SCOPE

Conclusion

The portal provides a centralized approach to resident management, security, maintenance billing, complaints, notices, and amenity booking.

It reduces dependence on manual registers and scattered communication channels while improving visibility for residents and administrators.

Future Scope

The system can be extended with mobile applications, automated notifications, richer analytics, QR-based gate passes, and additional society services.

THANK YOU
