Guide: Dr. Y Prasanthi · KLH Bachupally Campus, CSE

01 · OVERVIEW

One workspace for the whole society

A full-stack platform that replaces scattered registers and spreadsheets with secure, centralized community operations.

10 Core modules 7 User roles 1 Shared database

02 · PROBLEM & OBJECTIVES

The problem

Manual records make updates slow, fragmented, and difficult to trace.

Our objectives

- Centralize society records
- Secure every role and route
- Track requests and payments

03 · CORE MODULES

Flats	Residents	Visitors	Staff	Maintenance
Payments	Complaints	Notices	Amenities	Bookings

04 · RELATIONAL DATABASE DESIGN

ER diagram

PK Primary key · FK Foreign key · Lines show table relationships

05 · SYSTEM ARCHITECTURE

Secure three-tier workflow

bcrypt login → 8-hour JWT → server role check → scoped records

06 · IMPLEMENTATION

Role-aware interface

07 · ROLE-BASED ACCESS

Right tools. Right records.

The API authorizes every action; resident accounts only see linked flat and personal records.

08 · RESULTS & TESTING

Verified end to end

- | | |
|-----------------------------|--------------------------|
| ✓ Protected JWT routes | ✓ CRUD for 10 resources |
| ✓ Server-side authorization | ✓ MySQL constraints |
| ✓ Validation & errors | ✓ Postman API collection |

09 · CONCLUSION

Centralized and accountable

One reliable source for community records, access, and daily workflows.

10 · FUTURE SCOPE

- Payment integrations
- Mobile / PWA access
- Analytics and reports
